VISION NET MIGRATES TO ADVANTAGE CIRCUIT MANAGEMENT

Missoula, MT, October 1, 2014 – TeleSphere Software, Inc., (TeleSphere) a leading nationwide telecommunications billing software, professional services and SaaS provider, reveals the successful completion of Vision Net’s data conversion and migration project to TeleSphere’s Advantage Circuit Management (ACM) SaaS platform.

TeleSphere’s ACM is an Operations Support System specially designed for the management of access service requests (ASRs), circuit and facility design, inside plant inventory and workflow optimization.

“The robust nature of our product and services suite places us in a unique position to deliver innovative and reliable technology solutions to our regional customers,” remarks Corey Jensen, Vision Net’s Executive Vice President. “However, that product suite does present some significant operational considerations. As such, we are pleased to be leveraging TeleSphere’s ACM platform. The success and satisfaction of our customers and shareholders alike depends on our ability to leverage our network to its fullest extent and deliver solutions in the most expeditious and cost effective manner possible.”

“Vision Net was facing operational challenges that are fairly common to numerous middle mile providers,” observes Todd Twete, TeleSphere’s Vice President of Sales. “Their internally developed application had historically served the organization well, but due to changing business needs and priorities, simply wasn’t given the organization the desired network visibility and management tools critical to special circuit management and profitability.”

Via a Web-based, user-friendly GUI, ACM functionality ensures the realization of special circuit revenue and eliminates ongoing expenses when an off-net circuit is not in use. Facility and rack inventory management tools will enhance network asset visibility and minimize notorious and costly “truck rolls”. Operations, accounting and sales personnel can view workflow statuses, service-level agreements, customer contracts, images and other documentation thereby enhancing customer satisfaction and retention.
