TeleSphere Selected As Hot Technology Award Recipient

Missoula, MT, March 10th, 2015– TeleSphere Software announced today that its Advantage Circuit Management (ACM) platform has been selected as one of the recipients of NTCA’s Hot Technology award. Each year, a panel from NTCA evaluates new products and services based on innovation, usefulness, significance of improvement, relevance in the industry and creativity of display. Final selections are made in conjunction with the RTIME Expo. Award recipients are showcased in the Hot Technology section of the RTIME Expo floor.

Launched in Q1 of 2014, ACM is an innovative OSS platform optimized for the management of special circuits. Courtesy of a formal workflow process, key performance indicators (KPIs) are developed and the timing associated with revenue realization is improved. A variety of tools provide greater network visibility including inside plant equipment and the association of special circuits, customers and service level agreements (SLAs). Unnecessary costs associated with offnet circuits can be avoided via contract management reports. Maintenance and outage notifications can be expeditiously completed using recently released email notification functionality.

Todd Twete, TeleSphere’s Vice President of Sales, reflected on the award, “The recognition from NTCA further grows our confidence that ACM can address operational challenges associated with special circuit management and drive the associated profitability.”
